Your source
for strainers and
valves manufactured
from corrosion
resistant alloys.

- Strainers designed to meet with individual customer's pressure, temperature and operating requirements.
- Standard Material of construction is Type 2507 UNS S32750 duplex (ferritic-austenitic) stainless steel.
- Benefits of Super Duplex Stainless steel include high resistance to pitting, crevice, and general corrosion with a very high resistance to chloride stress corrosion cracking.
- Weld procedures qualified in accordance with ASME Section IX complete with micrographic, ASTM G48 Corrosion test and -51°F impact test qualifications.
